

Careers in Medicine

Careers in Medicine® (CiM) supports medical students in their career-planning and the faculty and staff who advise them.

CiM provides a variety of information and tools to help medical students choose a specialty, get into residency, and plan their physician career. But CiM also helps you hone your advising skills and maintain current expertise around specialty choice issues to build rapport with students and develop meaningful advising relationships.

The CiM Web site provides you and your students

- descriptions of and data for more than 120 specialties,
- career assessments to help connect students to specialty options that best fit,
- a list of clinical and research opportunities,
- a database of all active ACGME-accredited residency programs,
- descriptions of practice options, including academic and non-clinical jobs,
- advice for successfully navigating the residency application and match process and more!

Choices is CiM's quarterly newsletter that features day-in-the-life descriptions of specialties and advice for choosing a specialty and transitioning to residency.

Just for you

- Online articles to help you effectively use CiM resources in your work with students as well as improve your advising skills
- Canned presentations, workshops, and other group activities to use at your school
- Twice-yearly CiM workshops at AAMC headquarters
- Regular professional development conferences focused on advising students and implementing career planning in medical schools
- A listserv for sharing ideas and support from advisors at other institutions as well as for receiving news from CiM

Get started

If you haven't already received an e-mail with a link to sign in, contact the CiM liaison at your school. Visit www.aamc.org/cim to find your school's liaison.
